MICRO RINGS

.This method uses a ring or shell made of metal either copper or aluminium by sliding the ring onto the shaft of the clients hair, up to the root area. Then a shank of hair designed for this method is inserted into the ring and then the ring is clamped with a tool that resembles applier to flatten the ring holding it and the donor hair in place. some rings can be folded over to allow a more secure hold, and some rings are silicone lined so that the metal does not come into contact with the clients hair and to stop slippage. This method can last from 2 to 4 months and is very safe to your hair. Check pics <http://picasaweb.google.com/melkaja19/HairExtension#>

Bonding/hot fusion

Extension hair is applied strand by strand (Infusion) with a hot or cold form of adhesive. The adhesive can be a keratin based product or other natural-based products that can be very similar to the material that makes up the hair and nails and is considered to be non-damaging to your own hair. I use only high quality material. Check pics <http://picasaweb.google.com/melkaja19/HairExtension#>

Sewn weave BEST PRICE of this month- 18" 100£ for full head (Remy human hair)

this method of hair extensions is usually performed by making horizontal tracks from behind each ear meeting in the centre of the head at the back by either twisting and sewing or cornrowing the clients own hair and then sewing wefts of hair onto the tracks with specifically s more economical and less time consuming and also NON damaging method. Also called as French method <http://picasaweb.google.com/melkaja19/FrenchExtension#>

Clip in hair extensions

are simply wefts of hair usually 8 to 10 inches wide with wig clips sewn at the outside edges and inside centre. These clips are opened and clamped onto the clients hair in horizontal partings. Usually about 3 -5 tracks are used depending on desired results. these are very temporary and last one day safely in clients hair. to remove, gently open clips and hair will slide easily away.
